

Eli call: where things stand and next steps

Kristian Ivanov and Eli Gracia (LIS) · LWB webinar and October challenge · notes prepared Sep 22, 2026 from the call transcript

The short version

Webinar: the setup is working, so Eli says leave it alone and do not consolidate into a CBO. The weak cost per lead of the last few days looks Meta-wide, since his accounts saw it too. The real lever is creative diversity: new hooks on the same talking-head video keep reaching the same people, which keeps CPMs and frequency high. A "graveyard" campaign of unspent ads is an option for extra spend.

Challenge: move cold from \$47 to the \$17 front end, launched with the remade proven ads and a second pixel tested alongside. Warm at \$1,000/day is fine. Cold needs different ads and a tighter ad-to-page offer.

Part 1. LWB webinar funnel

Where it stands (as shared on the call)

Measure	Number	Note
Last webinar spend	\$22K	35.5% show rate. Cost per call quoted as 159 (the transcript is unclear; confirm in Hyros).
Yesterday	\$12.6K spend, \$20 avg CPL	CPMs roughly \$140 to \$276, around \$200 typical. CTR 3.5% average, one talking-head DCO at 4%.
Today	True CPL about \$29 to \$30	Mondays usually overspend. Eli sees the same spike across his accounts.
Old campaign (DCOs)	\$250 to \$300 cost per call	Mostly killed. The survivors keep running.
Frequency on broad	Above 1.5, up to about 3	Same audience keeps seeing the ads.

Current setup

- Individual ad sets and ads (ABO) beat the old DCO campaign on cost per lead, cost per call and ROAS. Budgets are pushed up by hand.
- A new scale campaign runs winners by post ID. One ad takes almost all the spend there and in the testing campaigns.
- A landing page test in late July showed the page makes little difference.

- Testing process: pick an avatar from the persona map, write for its awareness level, one angle with 5 hooks per ad set, at least \$500/day, run one full webinar event, keep or kill on cost per lead.
- Targeting: broad, age 40 to 65, warm audiences excluded, no interest suggestions.
- Day to day, all campaigns tend to move up or down together rather than one ad breaking.

What Eli said

Topic	Eli's read
CBO consolidation	Not while things are stable. Kristian wants it for stability if performance drops; Eli would not change a working setup.
CPL spike	Cost per lead was high across all his accounts too. He reads it as a Meta issue, not the account.
Graveyard campaign	Put tested ads that never got spend into one campaign with a cost per result bid. His runs \$2K/day at about \$17 cost per lead, cheaper than his scale campaign, and added \$8K of spend in 30 days. Most unspent ads are unspent for a reason, but it finds some winners. Best when scaling or waiting on editors.
Creative diversity	The biggest issue. The hooks only change the first 5 seconds; same presenter, background and clothes, all talking-head. Even on broad, Meta shows them to the same people, so CPMs stay high and frequency climbs, eating the bottom of funnel. New formats and angles reach new pockets.
What diverse means	Different formats, not just hooks: new backgrounds and settings, different talking styles, very specific avatar messaging, new primary text. UGC creators reacting to top ads gave his brands very low frequency.

Part 2. October challenge funnel

Measure	Number	Note
Spend to date	\$11.5K	Revenue \$6.2K (0.54x). Cold 0.16x, warm 0.90x.
Cold, Sep 18 to 22	\$3.5K spend, \$790 revenue	0.22x against a 0.5x target. Cost per landing page view still around \$8.
Warm	0.72x, Sep 18 to 22	Down from 1.18x (Sep 13 to 17). Budget doubled from \$500 to \$1,000/day on Sep 19.
Checkout close	22%	Down from 34% last report.
Visitor to order	1.1%	330 real visitors a day, 12.1% click the ticket button.
Test B Income #2	\$830 spend, 2 sales, 0.54x	Off since Sep 19. Two sales is too small to call a winner.

On the call cold was described as "0.25-ish" and warm as falling from 1.16x. The data says 0.22x for Sep 18 to 22 (0.16x to date) and 1.18x.

Topic	Eli's read
Price	Agreed: stop testing at \$47, launch cold at \$17. With time short, a lower front-end price is the best bet.
Pixel	Test a second pixel at the same time. Get a lead event firing, for example with a two-step page, so a new pixel has data. Some current pixel data "looks weird".
Old ads	Retest ads that worked in past challenges. Reuse the post ID and edit the body copy; old dates on the creative are the blocker, so use the remade versions.
Cold conversion	Needs better ads or a better offer. The ad and the page must match, and the ticket should feel like a no-brainer.
Warm budget	Costs rose because the jump from \$500 to \$1,000 was instant. Fine to keep.
AI VSL ad	The 3-minute story ad works on warm but not cold.

Next steps

LWB webinar: creative diversification and team (discussed after the transcript cuts off)

- Come up with more b-roll ads and AI ads for diversification.
- Hire UGC creators as soon as possible.
- Make AI UGC work.
- Hire a creative strategist / editor. Kristian cannot be the only person writing ads.
- Get more people onboard so more people are thinking of creative ideas, not one person.

Why Kristian cannot be the only person making ads

- **Eli's fix needs volume across formats.** His diagnosis is that every ad is the same talking-head format, so Meta keeps reaching the same people. The fix is b-roll, AI ads, UGC and new angles at the same time, and one person cannot write, generate and edit all of those every week.
- **The pace one person can keep is already the limit.** Eli's July rule was 5 to 10 new ads per funnel per week. With the webinar and the challenge both live, that is 10 to 20 ads a week, on top of running the accounts and the reporting.
- **AI ads alone eat days.** Kristian built the 3-minute AI story ad himself and it took a huge number of generations to keep it consistent. That is time taken away from strategy and account management.
- **One writer means one way of thinking.** Ads written by the same person come out in the same voice and structure, which is the same sameness Eli flagged. More people bring new angles, formats and ideas.
- **It is a single point of failure.** If Kristian is sick or busy, no new creative ships. Eli mentioned waiting on his editors; here, there is no editor to wait on.

Hiring plan

- Hire a content person (creative strategist / editor) directly, rather than sourcing someone from Ecom Talent.
- Put that hire through Ecom Talent's training so they learn the creative formats (b-roll, AI ads, UGC) without Kristian training them from scratch.
- Once trained, they own format production (b-roll, AI and AI UGC ads, UGC creator briefs and edits). Kristian stays on strategy, angles and the accounts.
- In parallel, hire UGC creators as soon as possible so new faces start showing up in the ads.

Kristian's role going forward

As Eli mentioned, Kristian's job now is to lead the ads creative team while still creating his own ads. He sets the strategy, angles and creative direction, reviews and approves what the team produces, and keeps writing ads himself. The creative strategist / editor and UGC creators take on production so new formats ship every week without everything going through him.

LWB webinar: account

- Keep the ABO setup. No CBO consolidation for now.
- Judge the CPL spike over several days and on cost per booked call from Hyros, not one bad day of Meta cost per lead.
- Optional scale test: a graveyard campaign of tested ads that never got spend, with a cost per result bid.
- Track frequency on the broad ad sets. Around 3 means the ads are circling the same people.
- Confirm last webinar's cost per call in Hyros (the transcript says "159").

October challenge (event Oct 16 to 18)

- Launch cold at \$17 on /octoberlt with the remade proven ads (Compound Taxation, CONTROL V0/A/B/C, The Information Gap). One new variable per test cell.
- Settle the \$47 spoken CTA: Preston re-records the line, or cut the spoken price and put \$17 on screen.
- Run a second cold ad set on a second pixel in parallel: the main LWB pixel with the challenge purchase event.
- Add a lead event before checkout (two-step opt-in) so both pixels get signal.
- Get Spiffy purchases sent to Meta (CAPI). Meta is missing about a third of sales.
- Check each cold ad matches the page: same promise, price and event dates.
- Keep warm at \$1,000/day and watch Sep 23 to 25 ROAS. Cut back if it holds under 0.7x.
- Turn off AS1 and AS2 if still spending (\$1,046 spent, 0 orders).

Open questions

- Which old token-head challenge ads did best? The list is in a local session on the other computer.
- Why is CTR about 4% on plain talking-head DCO ads while CPMs stay high? Recheck once new formats run.
- Follow-up call with Eli later this week if needed; he left 15 minutes early.
- The transcript file ends about 30 minutes in, mid-sentence. The creative and hiring points above come from Kristian, not the transcript text.
