

Eli call: where things stand and next steps

Kristian Ivanov and Eli Gracia (LIS) · notes prepared Sep 22, 2026 from the call transcript

The short version

Eli agreed the October challenge should move from \$47 to the \$17 front end, launched with the remade proven ads and a second pixel tested alongside. Warm at \$1,000/day is fine. Cold needs different ads and a tighter ad-to-page offer, not budget changes. On the webinar, Eli says leave the working setup alone, and fix low creative diversity, which is likely driving the high CPMs.

Where the challenge funnel stands (as shared on the call)

Measure	Number	Note
Spend to date	\$11.5K	Revenue \$6.2K (0.54x). Cold 0.16x, warm 0.90x.
Cold, Sep 18 to 22	\$3.5K spend, \$790 revenue	0.22x against a 0.5x target. Cost per landing page view still around \$8.
Warm	0.72x, Sep 18 to 22	Dropped from 1.18x (Sep 13 to 17). Budget doubled from \$500 to \$1,000/day on Sep 19.
Checkout close	22%	Down from 34% last report.
Visitor to order	1.1%	330 real visitors a day, 12.1% click the ticket button.
Test B Income #2	\$830 spend, 2 sales, 0.54x	Turned off Sep 19. Two sales is too small a sample to call it a winner.

On the call, cold was described as improving from 0.16x to "0.25-ish". From the data: 0.16x is to date and 0.22x is Sep 18 to 22. Warm was described as falling from 1.16x; the data says 1.18x.

What Eli said, by topic

Topic	Eli's read
Challenge price	Agreed: stop testing at \$47, launch cold at \$17. With time short, lowering the front-end price is the best bet.
Pixel	Test a second pixel at the same time. Get a lead event firing, for example by going back to a two-step page, so a new pixel has data to learn from. Some of the current pixel data "looks weird".
Old ads	Retest the ads that worked in past challenges. Reuse the post ID and edit the body copy; the dates on the old creative are the blocker, so use the remade versions.
Cold conversion	Needs better ads or a better offer on the page. What the ad promises and what the page sells must match, and the ticket should feel like a no-brainer.
Warm budget	Doubling from \$500 to \$1,000 raised cost, as expected with an instant jump. He thinks it is fine to keep.
Webinar setup	If it is stable, do not consolidate into a CBO. Cost per lead was bad across his accounts too the last couple of days; he reads it as a Meta issue.
Graveyard campaign	Put tested ads that never got spend into one campaign with a cost per result bid. His runs \$2K/day at about \$17 cost per lead (\$8K extra spend in 30 days). Use it when scaling or waiting on editors.
Creative diversity	The biggest issue. New hooks only change the first 5 seconds; same person, background and clothes. Meta keeps showing them to the same people, so CPMs rise and frequency climbs. New formats and angles reach new pockets: different backgrounds, talking styles, primary text, UGC creators reacting to top ads.

Next steps

Challenge funnel (priority, event is Oct 16 to 18)

- Launch cold at \$17 on /octoberIt with the remade proven ads (Compound Taxation, CONTROL V0/A/B/C, The Information Gap). Keep one new variable per test cell.
- Settle the \$47 spoken CTA: Preston re-records the line, or cut the spoken price and put \$17 on screen.
- Run a second cold ad set on a second pixel in parallel: the main LWB pixel with the challenge purchase event, as proposed in the Sep 21 handoff.
- Add a lead event before checkout (two-step opt-in) so both pixels get signal. The report also flagged that the lead form has no tracking event.
- Get Spiffy purchases sent to Meta (CAPI). Meta is missing about a third of sales right now.
- Check that each cold ad matches the page: same promise, same price, same event dates.
- Keep warm at \$1,000/day and watch Sep 23 to 25 ROAS. Cut back if it holds under 0.7x.
- Kill AS1 and AS2 if they are still spending with no sales (\$1,046 spent, 0 orders).

Webinar funnel

- Leave the working ABO setup as is; no CBO consolidation for now.
- Optional scale test: a graveyard campaign of tested ads that never got spend, with a cost per result bid.
- Brief the next creative batch for format diversity, not just new hooks: new backgrounds and settings, different talking styles, UGC reactions, new primary text angles.

Open questions

- Which old token-head ads did best in past challenges? The list is in a local session on the other computer.
- Why is CTR about 4% on plain talking-head DCO ads while CPMs stay high? Eli pointed to low diversity; worth a second look once new formats run.
- Follow-up call with Eli later this week if needed; he left 15 minutes early.
